

Literature Review & Gap Analysis Report

Research Focus: socail meadia impact

1. Introduction

{"method": "Novel approach described in this paper", "dataset": "Task-specific evaluation data (see abstract)", "key_metric": "Performance gains demonstrated over existing methods", "limitation": "Broader applicability and scalability not fully explored"}

2. Comparison Matrix

Title	Year	Method	Dataset	Limitation
The longitudinal impact of s...	2022	The longitudinal impact of social media use on	Task-specific evaluation data (see abstract)	This relationship was attenuated after including covariates
The impact of social media u...	2024	The impact of social media use on psychiatric	Task-specific evaluation data (see abstract)	Scope focused on impact social media; broader generalization not explored
Long-term consequences of ad...	2025	cohort of Swedish adolescents	Task-specific evaluation data (see abstract)	Most studies are cross-sectional, or short-term longitudinal studies, limiting conclusions about long-term effects
The impact of social media o...	2026	The impact of social media on adolescent mental	Task-specific evaluation data (see abstract)	Evidence synthesis needs updating due to the rapid evolution of platforms
Digital self-presentation an...	2024	on social media	Task-specific evaluation data (see abstract)	Studies show that social media use is linked to both better and worse mental health
The longitudinal impact of t...	2023	The longitudinal impact of the COVID-19 pandemic on	Task-specific evaluation data (see abstract)	Scope focused on longitudinal impact covid-19; broader generalization not explored
IMPACT OF SOCIAL MEDIA USE O...	2026	Social media is a vital tool in the life of an adolescent	Task-specific evaluation data (see abstract)	Also presenting potential risks to psychological well-being
The Impact of Social Media U...	2025	of technology warning functions	Task-specific evaluation data (see abstract)	Scope focused on impact social media; broader generalization not explored
The Impact of Social Media U...	2026	The Impact of Social Media Use on Adolescent	Task-specific evaluation data (see abstract)	Scope focused on impact social media; broader generalization not explored
Impact of Social Media on Ad...	2025	Novel approach described in this paper	Task-specific evaluation data (see abstract)	Broader applicability and scalability not fully explored
The longitudinal effect of s...	2022	Novel approach described in this paper	Representative dataset	Few longitudinal studies using representative data and mediation analysis have been conducted to understand the causal
The Longitudinal Impact of S...	2022	The Longitudinal Impact of Social Media Use on	Representative dataset	Few longitudinal studies using representative data and mediation analysis have been conducted to understand the causal p

The Impact of Social Media U...	2026	Over the past two decades	Pascal VOC	Broader applicability and scalability not fully explored
The Impact of Social Media U...	2025	Novel approach described in this paper	Task-specific evaluation data (see abstract)	Broader applicability and scalability not fully explored
The Impact of Social Media A...	2025	The Impact of Social Media Addiction on Adolescent	Task-specific evaluation data (see abstract)	Scope focused on impact social media; broader generalization not explored
Algorithmic Amplification an...	2025	In the past decade	Task-specific evaluation data (see abstract)	Opaque role in curating the content that users see
The Role of Social Media Ech...	2025	more transparency in automated content moderation	Sentiment analysis datasets	Also allows for radicalizing moderate opinions through the selection of only subtle discourse
Mechanisms of Algorithmic Re...	2026	Mechanisms of Algorithmic Recommendation on Social Media Opinion	Recommendation system datasets	Enabling personalized content distribution, have been criticized for fueling social media opinion polarization
Exploring the Impact of Info...	2026	Exploring the Impact of Information Cocoons Formed by	MS COCO	Scope focused on exploring impact information; broader generalization not explored
ALGORITHMIC BIAS AND POLITIC...	2025	for democratic values such as equality	Task-specific evaluation data (see abstract)	The increasing reliance on algorithms to curate content has raised concerns about political polarization, misinformation
Social Media and Political P...	2025	Novel approach described in this paper	Robotics simulation environments	The algorithms used on platforms tend to encourage conformity to the homogeneity of ideologies by promoting emotionally
Algorithmic influence and me...	2025	and novel formats	Task-specific evaluation data (see abstract)	Transparent ones can mitigate skepticism
Analyzing the Interplay betw...	2024	Analyzing the Interplay between Diversity of News Recommendations	Recommendation system datasets	These systems can inadvertently contribute to increased personalization, and the formation of filter bubbles and echo ch
Social Media and Democracy: ...	2026	This section provides the context	Robotics simulation environments	Offering powerful tools for citizen engagement and political participation, can also contribute to harmful trends that
AI's Role in Regulating Fake...	2025	AI's Role in Regulating Fake News and Misinformation	NLP benchmark suite	Preserving democratic discourse in West Bengal's diverse context

Designing social media conte...	2025	of content recommendation algorithms	Task-specific evaluation data (see abstract)	Scope focused on designing social media; broader generalization not explored
From information to influenc...	2026	study aims to investigate the interplay between generative AI	Task-specific evaluation data (see abstract)	Despite its advantages, it also comes with risks such as AI-generated misinformation, algorithmically tailored opinion-f
The Role of Social Media Alg...	2025	mixed-methods design integrating trace data	Recommendation system datasets	High computational requirements may limit practical deployment
The Future of Democracy in t...	2026	some problems to the platform	Task-specific evaluation data (see abstract)	Also introduce some problems to the platform, such as misinformation, algorithmic biases, polarization, and inequality o
Shaping climate change disco...	2023	diffusion of climate change information has been	Recommendation system datasets	Broader applicability and scalability not fully explored
Empirical Analysis of Social...	2025	research model with testable hypotheses	Task-specific evaluation data (see abstract)	SMLs strongly foster trust, our analysis reveals that trust does not mediate the relationship between SMLs and actual pu
"The Strategic Impact of Soc...	2025	"The Strategic Impact of Social Media Influencers on	Task-specific evaluation data (see abstract)	Bibliometric analysis underscores the growing academic interest in influencer marketing
The Role of Digital Influen...	2025	Novel approach described in this paper	Task-specific evaluation data (see abstract)	The exponential growth of influencer marketing, many organizations invest heavily in influencer collaborations without
Exploring the Impact Mechani...	2025	GPT-based GPT and the growing integration of AI-gener	Task-specific evaluation data (see abstract)	Also altering its underlying characteristics
The impact of social media i...	2025	The Gulf Cooperation Council (GCC) region	Task-specific evaluation data (see abstract)	Credibility and value misalignment trigger cognitive dissonance, reducing trust
The influence of social medi...	2025	The influence of social media branding on consumer	Task-specific evaluation data (see abstract)	Scope focused on influence social media; broader generalization not explored
The power of influence: How ...	2024	The power of influence: How social media influencers	Ebsco dataset	Prior research often treated SMI strategy, content, and credibility as separate elements, leaving a knowledge gap on how

Examining Effects of Social ...	2026	to the market in 2019	Task-specific evaluation data (see abstract)	Its increasing adoption, empirical evidence on the effectiveness of influencer marketing in developing countries, parti
DECODING CONSUMER TRUST: AN ...	2025	In recent years	Task-specific evaluation data (see abstract)	Previous studies have identified the broad impact of influencer marketing, this study sought to delve deeper into the s
Influencer Marketing and Con...	2025	In the digital age	Task-specific evaluation data (see abstract)	Chi-square tests examined the relationship between social media engagement and offline purchase intent
The Influence of Social Medi...	2024	using existing literature on topics like consumer decision-making	Robotics simulation environments	Digital expertise is not found to have a positive effect
The Effect of Social Media o...	2025	Social media has transformed consumer behavior in significant ways	Task-specific evaluation data (see abstract)	Broader applicability and scalability not fully explored
The impact of social media o...	2025	novel multifactor content optimization system (CMOS)	Task-specific evaluation data (see abstract)	Scope focused on impact social media; broader generalization not explored
Impact of Social Media Marke...	2026	Impact of Social Media Marketing on Consumer Buying	Task-specific evaluation data (see abstract)	Scope focused on impact social media; broader generalization not explored
Effect of Social Media Influ...	2025	Effect of Social Media Influencer Marketing on Consumer	Task-specific evaluation data (see abstract)	Also offer practical implications for brands seeking to leverage influencer marketing in a locally relevant and impactfu

3. Thematic Literature Survey & Synthesis

{"method": "Novel approach described in this paper", "dataset": "Task-specific evaluation data (see abstract)", "key_metric": "Performance gains demonstrated over existing methods", "limitation": "Broader applicability and scalability not fully explored"}

4. Identified Research Gaps

Gap 1: Attention

3.1 Methodological Paradigms Current research focuses on transformer-based approaches that leverage self-attention mechanisms. Multiple paradigms have emerged including sparse attention and low-rank approximations.

3.2 Empirical Evaluation & Benchmarks Validation typically uses standard benchmarks such as ImageNet, GLUE, and WMT translation tasks.

3.3 Identified Limitations and Research Gaps A critical gap remains between theoretical complexity reduction and practical latency gains.

3.4 Critical Assessment Despite progress, evaluation on out-of-domain data remains limited across most studies.

Citation Density: 1.00 citations/paper

Suggested Future Directions:

- Integrate attention with recent developments in transformer architectures.
- Validate attention models on broader, non-standard benchmark datasets.
- Explore scaling properties and hardware efficiency constraints in attention implementations.

Gap 2: Cnn

3.1 Methodological Paradigms Current research focuses on transformer-based approaches that leverage self-attention mechanisms. Multiple paradigms have emerged including sparse attention and low-rank approximations.

3.2 Empirical Evaluation & Benchmarks Validation typically uses standard benchmarks such as ImageNet, GLUE, and WMT translation tasks.

3.3 Identified Limitations and Research Gaps A critical gap remains between theoretical complexity reduction and practical latency gains.

3.4 Critical Assessment Despite progress, evaluation on out-of-domain data remains limited across most studies.

Citation Density: 6.00 citations/paper

Suggested Future Directions:

- Integrate cnn with recent developments in transformer architectures.
- Validate cnn models on broader, non-standard benchmark datasets.

- Explore scaling properties and hardware efficiency constraints in cnn implementations.

Gap 3: Gpt

3.1 Methodological Paradigms Current research focuses on transformer-based approaches that leverage self-attention mechanisms. Multiple paradigms have emerged including sparse attention and low-rank approximations.

3.2 Empirical Evaluation & Benchmarks Validation typically uses standard benchmarks such as ImageNet, GLUE, and WMT translation tasks.

3.3 Identified Limitations and Research Gaps A critical gap remains between theoretical complexity reduction and practical latency gains.

3.4 Critical Assessment Despite progress, evaluation on out-of-domain data remains limited across most studies.

Citation Density: 6.00 citations/paper

Suggested Future Directions:

- Integrate gpt with recent developments in transformer architectures.
- Validate gpt models on broader, non-standard benchmark datasets.
- Explore scaling properties and hardware efficiency constraints in gpt implementations.
